1 Introduction to AWS

This guide is designed to help some developers, and not, to explore the cloud technologies to learn how to program an FPGA (on cloud).

1.1 Register a new account

From this site you can register on the AWS platform: <https://aws.amazon.com/>. You can create an account choosing two possibility plans:

- Personal account, with some limitations (see more: [here](#));
- Business account, but attention because you need to register a payment card (see more: [here](#)).

Although, there is an opportunity to students, and anyone else has an institutional e-mail, to register on the AWS Educate platform¹: <https://aws.amazon.com/education/awseducate/>. This plan allows you to access to AWS Educate lab, which provides access to the AWS Console to enable practical application of concepts without the need for credits (in summary, more resources without having to pay).

Unfortunately, Education Plan doesn't give you the "freedom" to do whatever you want because use AWS Console only meanwhile a learn course (sandbox). This choice is still valid because you can use the various tutorials to create guides (like this) or understand how-to-use EC2 F1.

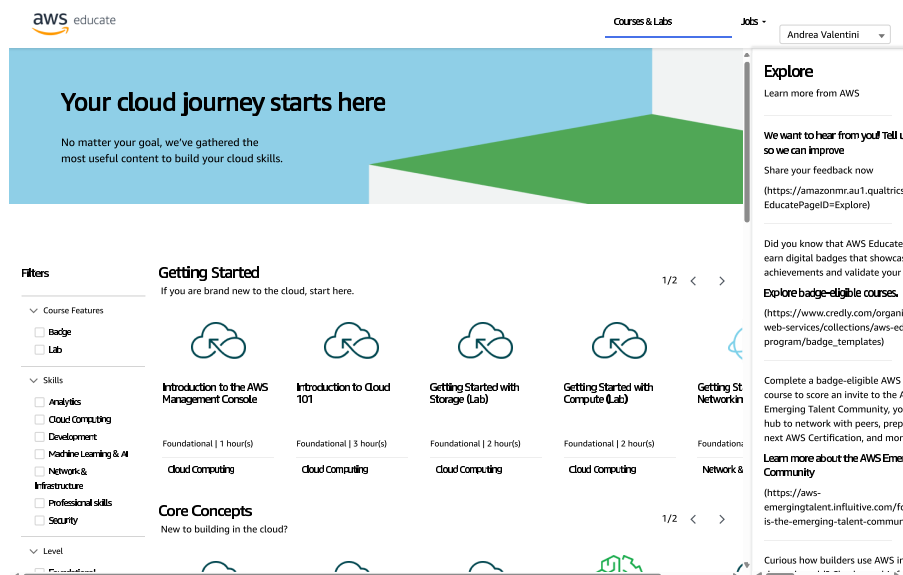

Figure 1: AWS Educate Dashboard.

¹FAQ: https://www.awseducate.com/registration/s/faqs?language=en_US

If you've chosen to use a personal/business plan, once inserted a pay card number, and confirmed it with a 1\$ fee you should have this screen:

Sign up for AWS

Select a support plan

Choose a support plan for your business or personal account. [Compare plans and pricing examples](#)
[You can change your plan anytime in the AWS Management Console.](#)

| | | |
|---|---|--|
| <p><input checked="" type="radio"/> Basic support - Free</p> <ul style="list-style-type: none">• Recommended for new users just getting started with AWS• 24x7 self-service access to AWS resources• For account and billing issues only• Access to Personal Health Dashboard & Trusted Advisor  | <p><input type="radio"/> Developer support - From \$29/month</p> <ul style="list-style-type: none">• Recommended for developers experimenting with AWS• Email access to AWS Support during business hours• 12 (business)-hour response times  | <p><input type="radio"/> Business support - From \$100/month</p> <ul style="list-style-type: none">• Recommended for running production workloads on AWS• 24x7 tech support via email, phone, and chat• 1-hour response times• Full set of Trusted Advisor best-practice recommendations  |
|---|---|--|

Need Enterprise level support?

From \$15,000 a month you will receive 15-minute response times and concierge-style experience with an assigned Technical Account Manager. [Learn more](#)

Complete sign up

On this figure, you can also see the various plans offered. To compare plans and pricing examples, you can visit this page: [link](#).

Anyway, choosing a Free plan will automatic start an AWS Free Tier ([terms](#)). The 12 Month Free Tier is only available to new AWS customers, and is available for 12 months following your AWS sign-up date.

If you have not used the AWS resources provided under an Offer during the previous 3 months, we may reclaim those AWS resources after giving you 30 days' notice. Even if your AWS resources are reclaimed, you may continue to participate in Offers using new AWS resources.

1.2 Getting Started

The first thing to do to understand how AWS works is read the Getting Started guide: <https://aws.amazon.com/getting-started/>. In this site, you can find some useful guides that explain cloud functions and others Amazon products.

After that, AWS shows you a sea of tutorials such as “Build a Serverless Web Application”, “Deploy a Web Application on Amazon EC2”, etc. Here’s the link: [Hands-on Tutorials](#).

If you chosen a Business (or free) account plan, this is your dashboard:

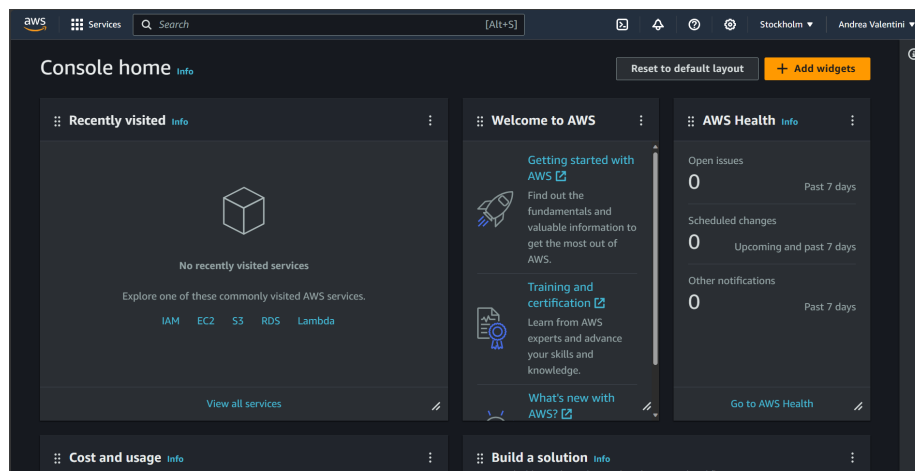

Figure 2: AWS Business/Free Dashboard.

On the left side you can see all resources created and recently visited; at the top you can see all hypertext link that can help you to start.

2 Amazon EC2 F1 Instances

2.1 Description

Amazon EC2 F1 instances use FPGAs to enable delivery of custom hardware accelerations. With F1 instances you can:

- Develop
- Simulate
- Debug
- Compile

hardware acceleration code, including an FPGA Developer AMI (see 2.4 cap.). Furthermore, EC2 supporting hardware level development on the cloud.

F1 instances provide diverse development environments: from low-level hardware developers to software developers who are more comfortable with C/C++ and openCL environments (see more on 2.3 par.).

Once your FPGA design is complete, you can register it as an Amazon FPGA Image (AFI), and deploy it to your F1 instance in just a few clicks. You can reuse your AFIs as many times as you like, and across as many F1 instances as you like. There is no software charge for the development tools when using the FPGA developer AMI and you can program the FPGAs on your F1 instance as many times as you like with no additional fees.

Instances Features:

- High frequency Intel Xeon Scalable Processors (Broadwell E5-2686 v4)
- NVMe SSD Storage
- Support for Enhanced Networking

FPGA Features:

- Xilinx Virtex UltraScale+ VU9P FPGAs
- 64 GiB of ECC-protected memory on 4x DDR4
- Dedicated PCI-Express x16 interface
- Approximately 2.5 million logic elements
- Approximately 6,800 Digital Signal Processing (DSP) engines
- FPGA Developer AMI (see 2.4)

| Instance | FPGAs | vCPU | Memory (GiB) | Instance Storage (GB) | Networking Performance (Gbps)*** |
|-------------|-------|------|--------------|-----------------------|----------------------------------|
| f1.2xlarge | 1 | 8 | 122 | 1 × 470 | Up to 10 |
| f1.4xlarge | 2 | 16 | 244 | 1 × 940 | Up to 10 |
| f1.16xlarge | 8 | 64 | 976 | 4 × 940 | 25 |

Table 1: The specifications of each type of *EC2 F1 Instances*.

For **f1.16xlarge** instances, the dedicated PCI-e fabric lets the FPGAs share the same memory space and communicate with each other across the fabric at up to 12 Gbps in each direction.

All instances have the following specs:

- 2.3 GHz (base) and 2.7 GHz (turbo) Intel Xeon E5-2686 v4 Processor
- [Intel AVX*](#), [Intel AVX2*](#), [Intel Turbo](#)
- [EBS Optimized](#)
- [Enhanced Networking*](#)

* AVX and AVX2 are only available on instances launched with HVM AMIs.

*** Instances marked with "Up to" Network Bandwidth have a baseline bandwidth and can use a network I/O credit mechanism to burst beyond their baseline bandwidth on a best effort basis. For more information, see [instance network bandwidth](#).

2.2 Amazon EC2 Pricing

The following table is a summary of the prices available. The costs depend on which nation you choose.

| Name | On-Demand Price/hr | 1-yr Reserved Instance Effective Hourly | 3-yr Reserved Instance Effective Hourly |
|-------------|-----------------------|---|---|
| f1.2xlarge | \$1.65 | \$1.06 | \$0.76 |
| f1.4xlarge | \$3.30 | \$2.12 | \$1.52 |
| f1.16xlarge | \$13.20 | \$8.50 | \$6.10 |

Table 2: Prices shown are for Linux/Unix in the US East (Northern Virginia) AWS Region and rounded to the nearest cent. Prices for 1-year and 3-year reserved instances are for "Partial Upfront" payment options.

You can visit the price page for more details: [click here](#). Although Amazon says you can try EC2 F1 for free, this is untrue. Amazon allows you to use (for 750 hours) a virtual instance (a virtual resource) to give you a taste. Instead, Amazon EC2 F1 are dedicated instances (FPGA).

2.3 Development Kit

Once you created an AWS account, you **must** downloading the AWS FPGA Development Kit by this official repository: <https://github.com/aws/aws-fpga>. It includes all documentation ([shortcut url](#)) on:

- F1
- Internal FPGA interfaces
- Compiler scripts for generating Amazon FPGA Images (AFIs)

AWS FPGAs support multiple development environments to serve both hardware and software developers:

- The FPGA Hardware Development Kit (HDK, [shortcut url](#)) provides fully custom hardware development;
- The FPGA Software Development Kit (SDK, [shortcut url](#)) environment allows developing accelerations using C/C++/OpenCL code with no hardware knowledge needed.

Again, this kit is **essential to develop fast FPGA for the EC2 F1 instances**.

2.4 FPGA Developer AMI

The FPGA Developer AMI is an Amazon Linux 2 based AMI provided by Amazon Web Services. The AMI is pre-built with FPGA development tools required to develop and use custom FPGAs for hardware acceleration. The FPGA Developer AMI includes Xilinx tools for simulating your FPGA design, compiling code and building your AFI (Amazon FPGA Image).

The FPGA Developer AMI includes Xilinx Vivado² at no additional software charge as well as a prepackaged tool development environment with scripts and tools for simulating your FPGA design and building and registering your AFI.

As mentioned above, developers can deploy the FPGA Developer AMI on an Amazon EC2 instance and quickly provision the resources they need to write and debug FPGA designs in the cloud. The FPGA Developer AMI is provided at no additional charge to Amazon EC2 users.

Typical Total Price (updated on 17th October 2023): \$0.796/hr.

See more: [AWS marketplace](#)

²Xilinx Vivado is a software suite produced by AMD (previously Xilinx) for synthesis and analysis of hardware description language (HDL) designs, superseding Xilinx ISE with additional features for system on a chip development and high-level synthesis. [Source](#).

2.5 The reason why you shouldn't choose the EC2 F1 Instances (for educational purposes)

The reason why you shouldn't choose the EC2 F1 Instances is quite simple: they're too expensive. If you are a student or a professor, this option is too much for a number of reasons:

1. As mentioned in table 1 on page 7, the computational power of each type of F1 is too much for a beginner that is learning how to program an FPGA. It's like saying: "I don't have a driving licence, so I should drive a Ferrari to train for the exam".
2. Although you can create a free account with 750 hours on EC2, you can't get the access to an EC2 F1 Instance(s) unless you pay a huge amount of money:

| |
|---|
| f1.2xlarge |
| Family: f1 8 vCPU 122 GiB Memory Current generation: true |
| On-Demand RHEL base pricing: 1.78 USD per Hour |
| On-Demand SUSE base pricing: 1.75 USD per Hour |
| On-Demand Linux base pricing: 1.65 USD per Hour |
| f1.4xlarge |
| Family: f1 16 vCPU 244 GiB Memory Current generation: true |
| On-Demand Linux base pricing: 3.3 USD per Hour |
| On-Demand RHEL base pricing: 3.43 USD per Hour |
| On-Demand SUSE base pricing: 3.4 USD per Hour |
| f1.16xlarge |
| Family: f1 64 vCPU 976 GiB Memory Current generation: true |
| On-Demand RHEL base pricing: 13.33 USD per Hour |
| On-Demand Linux base pricing: 13.2 USD per Hour |
| On-Demand SUSE base pricing: 13.3 USD per Hour |
